

Trust Projectplace and sleep better

Projectplace - Secure Project Collaboration

Projectplace is a secure on-demand service for collaboration and project management. We provide a highly available, efficient and safe environment to ensure that our customers' data is never compromised. Since security is crucial for our customers, we prioritise application and information security highly. Projectplace devotes significant resources to continually develop and improve internal processes as well as information and system security.

The CIA triad

The objective of Information Security is to protect the confidentiality, the integrity and the availability of information.

Confidentiality

Confidentiality is the concept of keeping private information away from individuals who should not have access. Any time there is an unintentional release of information, confidentiality is lost.

- You have full control over your project data in Projectplace
- The only way to get access to the information in Projectplace is by invitation from a project member
- All project information is transferred and stored in an encrypted format
- Projectplace employees cannot access your projects at any time

Integrity

The concept of integrity means that data is consistent and protected against unauthorized modification or destruction. Modifications should be clearly visible in order to ensure traceability.

- Projectplace has comprehensive traceability through object history - all changes are logged and visible
- Projectplace stores the data in a secure manner, the information will not be changed in any way
- Integrated functions such as continuous backups, version management and access rights management facilitate data control in Projectplace
- Projectplace only uses standard ports. There is no need to open your own network for external access

Availability

Availability means that you should have reliable and timely access to the data and resources you are authorized to use.

- Projectplace offers multiple Internet connections
- Redundant system architecture, from network appliances to database servers
- 24/7 monitoring

Projectplace's security

To ensure the security of the application, external IT-security consultants have tested every release the last seven years. All issues are reported and addressed by Projectplace, and inspected by the security company again.

Projectplace availability

2009: 99.95%

Downtime: 250 min

- Scheduled: 8 min
- Unplanned: 242 min

2008: 99.98%

Downtime: 122 min

- Scheduled: 13 min

Internal procedures, audits, and policies

At Projectplace, we are committed to high standards in terms of internal information security.

ISO 27001 framework.

We have adopted the international information security standard ISO 27001, which we base all our security related work on.

External security audits.

We regularly engage external security experts for security audits and reviews. A copy of the certificate issued after the most recent audit can be provided upon request.
